Senior Rails Engineer

at Sailthru

Wellington, NZ

Sailthru is one of the fastest growing SaaS companies in NYC. Our retail and publishing customers are among the largest organizations worldwide and they use our platform to provide a connected customer experience across today's ever growing list of channels, platforms and devices. We're a technology focused organization that gives engineers opportunities to focus on:

Working in a leading-edge, technology focused environment.

Collaborating with multiple teams within engineering and across Product, Design, Data Science, Customer Success, and more.

Solving coding challenges using a variety of technologies that make significant impact on the day-to-day operations of both our company and more than 400 client organizations.

Making significant contributions to the usability of our technology and having a voice in the direction of our product, design, and experience.

Maintaining a strong culture of excellence and fun while pushing yourself and your team members to go above and beyond.

Why Sailthru:

"I'm driven by top-line growth, and with Sailthru being on the leading edge of marketing technology, I found my home." - Aaron I., Lead Engineer

"I choose Sailthru because I have a tremendous impact on the scalability of our technology and am continually finding opportunities to improve myself as a software engineer." - Matt D., Lead Engineer

"We process in near real-time over ten billion customer communications monthly for more than 1.2 billion end-user accounts. Scaling a technology even further is one of the most exciting concepts for me as an engineer." - George L., Director of Development

The Role:

We're looking for an experienced Ruby developer to work on our mobile marketing platform, which powers real-time messaging, automation and analytics for the world's largest brands. Ideally, you've worked with Rails, Sinatra, Sidekiq and these are not scary for you (bonus points for Elixir experience). Writing tests is something you can't live without.

We have approximately 20 running micro-services that serve hundreds of millions of requests per month (and growing rapidly). Our services rely on a range of technologies, which you'll have to become familiar with, including: MongoDB, Elasticsearch, Redis, Rabbitmq, Fluentd, Docker, CoreOS, Ember.js, Elixir, GO, and RoR.

Technical Requirements:

5+ years of relevant experience

Strong experience with Rails, Sinatra, and Sidekiq (Elixir is a plus).

You understand data structures and algorithms, computational complexity inside and out.

You have a solid understanding of networks,operating systems, information security, and databases.

You'll rapidly familiarize yourself with the infrastructure use to support Carnival - RabbitMQ, MongoDB, Elasticsearch, Redis, and more.

You believe in the importance of tests and TDD.

You're comfortable within an AWS environment.

Scaling high volume, high throughput distributed systems is just another day on the the job for you.
